My led foot set the demand .  
Then thats the first number .  
TGOTB MOE .  
T set by my foot.  
Thats the prefect ballance evry time.  
any water past the valve can condense and sit there . a shorter stroke  
it will fall in by its self.  
T can instant change the displacement .  
run up past valve ,,or close top valve 2 with exhaust valve open and  
the water will ram back in wile upstroke .  
sneaky as fuck !  
water at 400 F is slick as the pistons .  
Its combined internal combustion with a steam engine ,,thats alloud to  
explode injecting o2 into th boiler when it hits 850 psi .  
The engine has no coolant and does evry trick to use all the heat .  
dry the 277 hp auto engine lpe is 80 pounds.  
5 gallons will fill this engine up.  
max is 1000 hp.  
at 277 hp it has 1000 foot pounds.  
it has no trans ,,no crank ,,no gear box.  
Id say the oil boss will be soon out of work.  
so is the electric co ,, power plants ..  
GM and ford goes to hell over night.  
evry one fears the evolution lpe inline rotors.  
they have evolved them selves as if the public had 15 years on them .  
Without a patent asa cheet page to copie with .. writing programs to  
fit running changing engines will be a time to biuld up a run program  
for te competition.  
I will hav 5 years to put them under.  
It will take 5 years before they can run a line .  
Im allmost ready do smash the market with 10 million cars .  
The law states they must buy the electric ...  
a car owner beets the electric co ass .  
The first 10 million cars run by the law till they change it. And  
untill I sell 100 million more.  
The price will make bill gates role over at night.  
because 3 years will sell 1/2 billion cars.  
the oil boss will want 30 bucks a gal of gas and wount get 30 cents.
