You are, unfortunately, in the wrong newsgroup. Usenet is not a good forum for polishing ideas. I think you've set your feet on an interesting path and you have the potential to do something worthwhile with the subject matter because thus far you've not demonstrated being in lockstep with people who think time is a simple tool. You will, in sci.physics, be torn to shreds for your efforts if you continue here despite the fact that there are those like me who would appreciate being onlookers as your growing insight is vocalized.

Best of luck in your endeavors.
