You will, in sci.physics, be torn to shreds for your efforts if you continue here despite the fact that there are those like me who would appreciate being onlookers as your growing insight is vocalized.

Not torn to shreds, after all, this is just Fantasyland, nothing real.

The way to deal with such behavior is to realize that no constructive dialog is possible here. Just post and never return to read the replies. One may dig holes and fill them back in between posts for an isomorphic activity.
