the tray dont slide when the ship roles .
you can let the ship role the seads out of yer cheap shit .
jamaka south of usa ..\$ 30 oz .
nice mountain grown indica cal sinnsy ,
Its so cheap we let the cook bake all day.
dont eat the browinies ;
jack daniels bootleg bar... I was tying my shoe not looking up here
dress ,,I swear.
The tray is 75 pounds.
poured into a pottery mold preheated
I have a solid gold elephant on the center pice table that is 2500
years old , it is 250 pounds solid yellow gold. with papers ,,its worth
20 million.
but I paid 1 million to nickle plate my hull.
It wount rust . Thats dirt cheap ..
it got epoxy clear coat and its 2 years new and 5 years old .
biult in 2000 at around 19,000 tons.
as a cruise ship pacific princess sister.
got it in 2002 and re worked and removed ,,paid 120 mil ,,removed lower
class and installed a garage hold with a side door bus size. toulk the
laundry out and put in engine room 3 , kept the old 2000 engine room
to class up with .
Put a machine shop in too.
and the mag train takes the 1 car from end to ship end at roro deck .
removed 16 elevators.
added 15 townhoses 5 million each .
sold all townhouses for 10 million each to my officers .
converted second class to bungalows to combine inside rooms with the
terrace rooms.
made 50 nice houses .
each house has 4 guest rooms and 3 baths .
added a sci lab with moon pool.
upgrded the movie palace 500 seat .
upgraded fuel cap .
running 7 second strokes detnation into steam .
1 sec o2 per 4psi cu ft and then steam pumps th head presure to 167 psi
then the fuel injector fires BANG..
The standing lpe with no rotor is a tall pipe and I can slide the head
down inside the pipe .

Re: tj's 1st peddler attempt with Gold

The pipe is just simply taller than the ship water line . for a 8 foot stroke the pipe head is placed 1 foot higher in the pipe than the water line .

In 1/5 sec it pumped up to 100 psi of steam and o2 4 lb o2 and 98 pounds steam .

Then direct injected with a electric fuel injector.

5 foot 5 second stroke from a 6 inch out a 3 inch nozzle is same as a 350 ci small block jet boat. 1000 pound thrust from 6 inch intake area just a mini ship engine so you can understand its value . 19 times the mpg .

one engine I built has 20 pipes standing ..

all the pipes flap water into accumulator that has the jet nozzle in it

The tank cant fill with water because the water compresses air in the top .

You can use that in the next cylinder you want to fire by sending accumulator chamber air tank surge gasses to be used as intake head pressure .

3 cylinders dont need an air compressor .

...and knocking it as steam sends the 1/50 compression time into getting the water started moving ,,then bang fire the injector into the steam o2 mix of intake gasses .

Boat motors convert thrust into rotation ..

200 HP V 8 converted thrust to the power head to water and is 120 HP at the water.

a 1 inch nozzle will blow the bolts out of that 200 hp.... a 8 foot pipe 5/3 inch with a 1 inch nozzle and bend the pipe to 90 at 14 inches

..

a ball valve in the end and 1 injector 1 spark plug and your touch O2 tank .

2 accumulators and a quick fill box .

1/29 TH the fuel ad flat out blow that 200 HP jet boat to hell.

its taking a 4 second stroke to its max thrust because it will push water out the end till it cant . then the top valve opens .

water falls into the side of the pipe and fills it in 2 seconds via long flap valve reid.

3 of them produce a constant thrust and every stroke uses all it produced.

A pound of psi is a pound of thrust .

its NOT converted into rotation then back to thrust .

How could idiot engine compete with it ?

I can mix more shit than just gas and o2 and fire it at 1000 fucking pounds !!!

It dont take much of a water pipe to handle 1000 pounds . 1.2 sec stroke !

ram water filled.

1000 feet in the sky in 5 seconds.

thats where your boat would go with my whale in it.

3 and 1/2 inch nozzle 10 square inch hole .

100 psi is 1000 pound thrust out a 3.5 inch.

Thats a jet boat v6 .

1000 pound thrust or 10,000 pound thrust on aux fuel.
