For example, Gondwanaland split in such a way that Brazil split with West Africa, India split with Northeast Africa, Antarctica split with Southeast Africa, Australia split with Antarctica.

Laurasia split into North America from the northwest, Asia from the east, and Europe from the south to southeast except for India and Arabia which were part of the Gondwanaland split. Egypt was part of the Northeast Africa part of the split, as apparently was Israel or what is now Israel. The main split in Laurasia was actually between North America on the northwest and the remaining places (Asia, Europe) so that western-most Europe and northern-most Asia were on the boundary and this includes the U.K., France, Spain, Russia/Ukraine.
