Zero and one are base2. There are many zeros and many ones. The collusion of more than one "zero" and more than one "one" is 'Complexity' and 'Chaos'. But at the farthest top, as well as at the farthest bottom, there is reduction to zero and reduction to one. The inside turned outside (to absolutely OPEN, thus infinite...and infinitesimal...Universe). And at once, the outside turned inside (to absolutely CLOSED, thus Big Bang and Planck bracketing horizons).

Tell me where and how there can be "expansion" without an absolute equality of "contraction" existing both at once in parallel and sequentially? "Infinite" without an absolute equality of "infinitesimal" existing both at once in parallel and sequentially? "Closed" without an absolute equality of "open" existing both at once in parallel and sequentially? "Unity" without an absolute equality of "division" ("schism") existing both at once in parallel and sequentially? "Future" without an absolute equality of "past" existing both at once in parallel and sequentially? "Hot" without an absolute equality of "cold" existing both at once in parallel and sequentially? "Plus one" without an absolute equality of "minus one" (for results "zero"....and/or "one")?

Physicists talk about "Unification of the Universe's Fundamental Forces" in a hotter than hot temperature. There can be no such hot temperature without an absolute equality, in parallel, non-sequential, of a colder than cold temperature. It cannot hang out there as a "naked singularity." A naked singularity can only be neutral. Absolute neutrality. And even "neutrality" cannot exist without the simultaneous existence of at least two other opposing extremes which it is neutral to (neutral relative to..., or neutral regarding....).

"Everything" (1) and "nothing" (0) — everythingness (1) and nothingness (0) — have meaning: the twain being two (2), base2, the third dimension of the two pulsing so much, so hard, so fast that there is no pulse, only [and/or]. There is no zero (0), no one (1), there at all. The third dimension is our infinity dimensioned dimension. It is our dimension though there are those alien utopian humans who would rather cajole, or failing that coerce, us be one (everythingness) and/or zero (nothingness) dimensioned only. All together, an evolution to "vacuum" in some eventual evolution to "naked singularity." Ultimate reduction (ultimate reductionism). Everythingness and/or nothingness! All or nothing! (ipso

Universe Opposed In Triplicate

facto, all [and] nothing!) Utopia (Dystopia), the evermore perfectly flat "better world" (better Universe). Better diamond / better flaw. Better matter / better anti-matter. More perfect matter / more perfect anti-matter. Perfect matter / perfect anti-matter. Naked singularity.

"Power corrupts. Absolute power corrupts absolutely." Just the fact (just the physics). I'd rather have an open space frontier, thus an open world. A wide open space frontier.
