I would like to inform Harry Hansen and all of my fans, that I finally got around to uploading a graphics-oriented PDF file to my web site, that integrates the four forces, and explains why the various constants such as C, e, G, and Z come about.

The article clearly and graphically shows how all of the physical properties and the four forces are defined in terms of time periods, time intervals and constants.

I must mention that I was able to integrate the electro-magnetic properties with the time, space, mass properties using one constant, the conductance of space. (1/ the impedance of space constant)
This approach brings many conflicting concepts of physics into focus.

As sharp minds know, Maxwell used two constants permeability and permittivity to do this.

If you want to comprehend physics, visit my web site and download the PDF file. It's about 300K, mostly graphics.

After you read the article, be sure to write your friendly Nobel Prize representative.
