AHAHAHA.....as he usually does, and most likely cannot help himself
Tom Potter <tdp1001@xxxxxxxxxx> quarrels with every poster in this
thread trying to peddle his "graphics-oriented PDF file".... ahahaha....
<news:1140611402.955306.30810@xx>

I would like to inform Harry Hansen and all
of my fans,
that I finally got around to uploading a
graphics-oriented PDF file
to my web site, that integrates the four
forces, and explains
why the various constants such as C, e, G,
and Z come
about. The article clearly and graphically
shows how all
of the physical properties and the four forces
are defined in
terms of time periods, time intervals and
constants.

Gee! Einstein worked for years without success on unifying
the four forces, and you do it with one 'article.' Maybe Prof.
Einstein was just stuck on 'conjunctions' or something. I
know I always use conjunctions to unify things.

[Tom]

Re: Article unifies the four forces

Perhaps Einstein, like Aristotle, is part of the problem, rather than part of the solution. Perhaps a generation of people have been conditioned to worship Einstein, and accept his words like the Davidians accepted the words of Koresh. As can be seen, the Einstein cult gets all bent out of shape if anyone dares to question their God.

[hanson]

ahahaha... not so loud, Tom!... you give the impression here that you are sour that people admire Einstein instead of you and that you are going to do something about that.. ahaha..

[Tom]

As I have posted, GTR seems to be a Tower of Babel, that generates more heat than light, and wastes time, money and minds on such pursuits as time travel, worm holes, black holes, warped space, dragging space around, gravity waves, etc. And of course, it is obvious that reality consists of quantum events, and is discrete, not continuous as required by SR&GR,

[hanson]

... ahahaha.. yes, we all know that..... even Einstein himself did say so 50 years ago to Besso:
= "I consider it quite possible that physics cannot be based
= on the field concept, i. e., on continuous structures. In that
= case nothing remains of my entire castle in the air, gravitation
= theory included, [and of] the rest of modern physics." -- A.E.
or when Albert exclaimed that
= "As far as the laws of mathematics refer to reality, they are not
= certain; and as far as they are certain, they do not refer to reality"

These days, barring the geriatric mental masterbators of relativity, the antics of theoretical physics does move away from equations & moves and more toward concepts that use computing power to fit observations into models, like in Steven Wolfram's stuff, or the older self-similarity hierarchy etc... all of which indicate more novel thinking than the pedestrian appendages of SR/GR ... ahahahaha...

So, what exactly is the news you are announcing here, Tom?...

[Tom]

when I finish fencing with the Einstein ****wind****mills,
I'll be working on this... [the four forces in the PDF file??]

Re: Article unifies the four forces

[hanson]

That is exactly what you should do, Tom, as was suggested by poster "Sue... aka Dennis" who wrote to you, Potter, in <http://groups.google.com/group/sci.physics/msg/a34392094c571078>
The name of the article is: "Unifying the four forces PDF file"
<http://home.earthlink.net/~tdp/unifying%20the%20forces.pdf> from <http://no-turtles.com> ... Periodic Table ADventure... man named Dmitri Mendeleev, who created the first Periodic Table of the Elements. ... On these cards, Mendeleev wrote information such as the elements' ... <http://web.buddyproject.org/web017/web017/history.html>
Mendellev Cards... the process by which Dmitri Mendeleev organized information into a periodic table. ... Use the element cards sheets and the envelope form with student ... <http://www.thebakken.org/education/SciMathMN/mendeleev-puzzle/mendele...>

[hanson]

Whether you realize it or not, Tom, you may be onto something with your tabulations. Work on that and unify them. Dennis' reasoning is well justified. Most theories, including SR/GR do really only make post-dictions but not any pre-dictions even in its carefully selected experiments that fit the tune. OTOH, the Periodic Systems, the table of the elements, has actually made PRE-dictions and told researchers "where to look for what" with its "eka-elements" conjectures.... Similarly, your polished tabulations could be used to take certain properties combos (in your boxes) to look for new physical properties of matter in the same fashion...

What is MUCH more important than filling in the slots for ignored physical properties,

is that my article indicates that ALL forces, not just the four main forces, but derivative forces such as molecular and frictional forces, are basically functions of time periods, time intervals, and perhaps some constants which are functions of tiling.

The current system of constants which is based on efforts to hack experimental values, distorts the basic picture.

For example, the constant "C" makes most people think that spaces and lengths are something different for time intervals,

and the constant "G" makes most people think that masses perceived to be fixed in time and space

Re: Article unifies the four forces

Re: Article unifies the four forces

are something different from masses perceived to be varying in time and space.

The problem is that most people worship Newton and Einstein, and as "G" and "C" are associated with these persons, this obscures most people's reasoning, and perpetuates a large set of misconceptions and distortions, such as gravity waves, photons, worm holes, warped spaces, time travel,

the complementary principle, etc.

Aristotle sent science on a 1500 year detour. Hopefully, Newton and Einstein will not do the same.
