I like the 1898 science fiction novel as much as anyone else where they combine space and time for the 'Time Machine' –

" 'Scientific people,' proceeded the Time Traveller, after the pause required for the proper assimilation of this, 'know very well that Time is only a kind of Space.'"

<http://www.bartleby.com/1000/1.html>

But I sure as hell would not want to spend a billion dollars trying to prove if that science fiction novel was right –

" Question 42 ; What does the word 'spacetime' mean?"

It means that in our universe, 3–dimensional space and time form a single indivisible new physical object which has 4 dimensions. All physical laws and phenomena seem to require thinking about space and time as this blended object. That's what Einstein's relativity theories were all about. "

If you can tell the difference between the science fiction novel and the Nasa/Stanford version then you are a better man than I am. Maybe the U.S. gov will give you a billion dollars to prove that the science fiction novel 'Journey to the center of the Earth' should be proven as a fact !!.
