That's correct. "Try" from the Latin tri, as in try this, we have a plan c.

In most cases it is nothing happens, because that is the safest bet isn't it?

When in doubt do nothing, else you are taking a shot in the dark.

In mission critical situations, well the show must go on so you are heading for the moon, at mach 5, well plan c, transmorphigate the flangethrasher in the revitigator, it would appear that quantum fluctuations in the tachyon field are distorting the space-time continuum, affecting the time-manifold, sh\*t happens.

.
