Seems to be from a mainstream source finded by the ESA...

<http://www.arxiv.org/ftp/gr-qc/papers/0603/0603033.pdf>

Quote: If confirmed, a gravitomagnetic field of measurable magnitude was produced for the first time in a laboratory environment.

Wow. This is indeed Bellweather news. Confirmation of induced electrogravity will be Nobel level news– if those Old Dogs in Sweeden have the balls to admit what we have always instinctively known. A tip of the hat to Tajmar et al.
