Assume there are only two objects in the entire universe.
Let the first object have mass m_1 and have motion described by the equations $x=f_1(t)$, $y=f_2(t)$ and $z=f_3(t)$. Let their rotational motion be described by $f_4(t)$, $f_5(t)$, and $f_6(t)$.

Similarly, let the second object have mass m_2 and have motion described by the equations $x=g_1(t)$, $y=g_2(t)$ and $z=g_3(t)$. Let their rotational motion be described by $f_4(t)$, $f_5(t)$, and $f_6(t)$.

According to general relativity, what is the force between these two objects?

I am aware of the fact that problems like this often become quite complicated in GR, but I am fine with an answer that contains such elements as differential geometry and tensor analysis.

Thank you in advance.

Face the facts.

General Relativity,
like Communism and Freudism,
is a Tower of Babel,
that has roots in race and religion,
rather than utility.

Things should be judged by their works,
and as can be seen,
General Relativity wastes time, money and minds
on such pursuits as worm holes, time travel,
alternate universes, black holes, warped spaces,
gravity waves, gravitons, etc.

Rational, intelligent, prudent people
do not waste resources on ideas and tools

Re: Question about General Relativity

that consume their resources and return little
or nothing in return.

The best model for shaping one's future
is to approach reality from THEIR frame of reference,
and to use the simplest tools and coordinate system.

General Relativity is just the latest form of auguring.

The modern world is built upon the framework
laid down by the Lunar Society,
a group of men who discarded the notion of auguring
that had imprisoned the minds and works of man
for time immortal, all over the world.

Instead of auguring, James Watt,
and the other Lunar Society members,
took the equations of Newton and others,
and used them as tools to control their futures,
rather than react to uncontrollable forces of Nature.

Europe moved ahead of the other nations on the Earth
after they discarded auguring the future,
in favor of using effective tools for controlling the future.

Japan immediately recognized the utility of this idea
after Dewey exposed them to Western ideas,
and they quickly gained in power.

It is interesting to see that China,
and most Asian nations are adopting controlling
rather than auguring their future,
while America and the West are
wasting more and more time, money and minds on auguring,
using General Relativity as their chicken entails.

I suggest that Asia will quickly move ahead of the West
as more and more Asians adopt controlling the future,
and more and more Westerners adopt auguring the future.

A mind is a terrible thing to waste.
