I haven't seen any hanson posts for several weeks.  
Does anyone know what the score is?

I'm hoping hes dead.

Oddly enough, Traveler hasn't been spreading his fetish across USENET recently. No way they are the same person!

Maybe he got arrested by Homeland Security  
for trying to instigate someone to assassinate the Decider.

You can not possibly be intelligent enough to enjoy the daily show...

You got to admit that hanson knew a lot about GTR and the GPS system.

No....no he didn't.

One of his last posts was:

"... ahahaha... of course you know that only from hear say, which is a very effective form of relativity... But every engineer knows that GPS-relativity is only used by the marketers and salesmen for GPS stuff to get little fanatics like you to fork over your money so that you'll have less buyer's remorse and can bamboozle your fat girlfriend with: "Look honey, Einstein made this".... ahahaha.. But in the halls where they design/manufacture and test GPS-stuff every worker knows that the (in) famous 38 microseconds for GPS are strictly and simply Newtonian per the equation of

Re: Where is ahaha.... ahahahanson?

Re: Where is ahaha.... ahahahanson?

$(M_e / h) * (2 G/c^2) * 86400 = 38$  microsec which solved the clock problem for that case. --- But you wouldn't get to know that from just watching TV... ahaha... There's a big world behind the TV. "

hanson is an idiot. Newton has no such correction because Newton does not use c.

Hey!  
Come to think about it,

You haven't thought before, why start now?

maybe hanson was done in by some General Relativity cultist!

Here's hoping he comes for you, next.
