:-) I am looking forward to seeing how Jeff, erm, responds to this.

I would bet a tenner on "completely ignores" but thats a too easy bet!

Sadly, you may be correct here. There is always the chance that he will reply with some word salad, in which he will use as many "science-sounding" words as possible – with no concerns over how appropriate they may be.

PS have you shoved "Jeff_relf" into google. He's like the Leonardo da Vinci of cranks. I've been hard pressed to find things he doesn't profess hidden knowledge to.....

And the things he's admitted.. posting his address, money issues, posting nude....

Urgh. I think you've put me off my tea now...

If my mond boggled anymore it would introduce spatial distortions to the cosmos....

Its OK, Jeff will come up with some more. I mean why not have another dozen or so dimensions..
