So, he was wrong about:  
Light always moves at c  
relative to an observer.  
Photon as such is  
not, it is just a mathematical  
concept,

You, who falsify logic and  
clear understanding, you are  
the pitfall  
of humanity. You \*get\*  
what you preach.

fucking gibberish.

you really are a retarded clog wearing, tulip  
smoking idiot.

go boil your fricking head.

Now, now. There's a simpler explanation. The old  
green-eyed monster.

Re: Albert Einstein a Jewish anti-scientist

what the fuck are you talking about you fricking eejit.

Jealousy, of course. Presumably Jan's jealousy of Einstein's success. :-)

I'm not entirely sure he was 100% successful — one of Einstein's great mistakes was assuming a static universe at one point — but 99.9% is darned good. :-)

Well, everybody pretty much assumed a static unchanging universe until Hubble's discoveries. The irony is that Einstein used the cosmological constant to stabilize the runaway universe until Hubble showed otherwise. When he then discarded it, calling it the "greatest blunder of my career", he really couldn't see how it could ever be useful again, but here we are.
