3 billion bucks

PacCats are caremerns and fuel nutz gas turbines . The ride is rough .

Its near 100, million engines biult.

3 billion branson bills is more kitty to buy GM and Ford with .

I dont want to crush GM and not buy it.

And why would we not buy it ??

You dont think we can replace evry car on eath without usa steel do you ?

GM and Ford in 19 countries .

The whole enchulata emagoe gigante .

If the GM and ford colaps and is not replace then allot of dice will fall .

And then 100,000,000 is not a small engine plant ..its the planets biggest yet not big enough.

We can buy out GM and Ford and still be too small. And retool for 4000 pound suv LPE and 6000 pound cruisers plus the smaller sports where 2 billion cars world wide is the market.

Plus the personal home power plant hot water heater lpe steam engine lpes.

2 billion of those .

Plus lawnmowers tractors and big trucks.

It will take the competition too long to compete.

I calculate after the stock crash of GM and Ford with no sale 1/4 its a stock takeover at 14 billion down from a stock value of 240 billion.

Thats 51 % and makes LPE the fucking boss.

200,000,000,000 is 200 billion worth of 100 million lpe . 200 billion is a market jolt so big the bolts at GM and Ford will pop off the heads of the investors and the big motor will blow.

200 billion bucks in profit and the 100 million engines wount be enough at 1/22 the fuel imput and a stonger smarter larger car.

200 billion buck quarter will bust the bell on wallstreet and make 4 bill gates in 3 months.

4 times as big as billl gates will scare the living fuck out of

evryone and the GM Ford Honda stocks will freefall befor we sell the first 10 million . New drivetrain on any car wile you wait. Then when you want a new car we put your drivetrain on it .

Then we buy out GM and Ford who cant sell a car with an engine in it. Then we biuld cars with USA steel.

Re: Dennis Washington's Daedalus and PacifiCats.

No one else makes enough steel to build as many cars as will be built at 10 % the fuel twice as large . Hummersville .

ships trains planes cars trucks ..we need GM ford chrysler cat dodge cadillac an all of them.

If its going to crash we need to have the funds to buy it up and push the end of the oil age threw the gates o hell and put power plants LPE in all the poor places and employ them with power labor as shipping becomes cheap.

The poor nations wount need anything but people to work because we can produce the electric just dirt cheap and the labor gap will put food where there was noneor wount be when we end the oil age.

The end of the oil age would be the end of sand niggers if we dont put a power plant there and manufacture .

You cant manufacture in a dictatorship because you would suck at evrything .

they will start that way but wount stay that way and compete without insentives on idias.

A pattent is stupid.

Ill file the day befor 100 million engines hit the market and let the market work.

Why the fuck file and start a race of competition as history proves a race would take place and the biggest GM and Ford would just outproduce me and take most the market I created.

"I got abetter fucking idia" H Ford .

Ill come out on the market and squash it with outproduced . Even if GM and ford coppied it they cant take the market share quick enough and Ill crunch and conquore .

Fab 4 step up with 14 billion to match my 14 billion . Thats too big a chunk at once to buy at a few cents onthe buck would make it the worlds market share .

Any car ever biult .

order a 1930 cadalac road king .

28 feet long but 8 feet is hood.

million mile garrentee.

277 hp 250 mpg

up tp 4000 foot pounds slow speed.

2000 foot pounds down the road at 75 mph.

The cars have 20,000 mile range.

It recycles its water .

fuel oil and o2 and Ill see ya in 20,000 miles.

.
