Nobody knows and don't believe them if they say they do.

And another thing, our knowledge is only descriptive.

You'll say "Of course".

But it appears to me at times that individuals at as if a description is equal to the thing in itself. Some people are way to arrogant in their descriptive "power".

This tendency among some "scientists" to proclaim "Observe our powers ! We don't need God anymore.....we've outgrown him !"

BWBWBWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA !!

Meanwhile our physicists stumble around in confusion in the face of reality and our race is threatened with extinction by mere miniscule lifeless viruses.

You want to know the actually place of humanity in this universe ? Powerless little creatures huddled together shivering in a cave while lions, tigers and bears roam just outside the entrance. One false move and we will all be devoured.

.
