Sure. Start with a bar magnet that can lift 1/4 kilo.  
Then get another that can do the same.  
Tie them together. Attach a pan to a block of iron.  
Lift iron with magnets.  
Add weights to pan until block falls.  
Record load. Report details back to us.

Too bad, I don't have two magnets of the same size in house. I could try to strip down my television and look for them, but my favorite show is on tonight...

Maybe you want to give me another hint?

.
