G. L. Bradford wrote:

Greene addresses one and only one traveler and traveler's clock. The limitations of the speed of light create a minimum of two travelers and two traveler's clocks, the real traveler and clock, and the virtual traveler and clock.

And what makes one traveler "real" and one traveler "virtual" in your opinion?

The way light transmission of information to observers, regarding time, works of course:

Src(t0).....|Obs(t0)|  
 Src(t1)>(t0)>.....|Obs(t1)|  
 Src(t2)>(t1)>(t0)>.....|Obs(t2)|  
 Src(t3)>(t2)>(t1)>(t0)>.....|Obs(t3)|  
 Src(t4)>(t3)>(t2)>(t1)>|(t0)Obs(t4)|

(Src-real(t4).....|Src-virt(t0)Obs-real(t4)|)

Or far better, far more like it, in my view:

Src(t0).....|Obs(t0)|

Re: For Seto: Theories incompatible with relativity

Src(t0)>(-t1)>.....|Obs(t0)|  
Src(t0)>(-t1)>(-t2)>.....|Obs(t0)|  
Src(t0)>(-t1)>(-t2)>(-t3)>.....|Obs(t0)|  
Src(t0)>(-t1)>(-t2)>(-t3)>(-t4)|Obs(t0)|

It would stretch out (in between) for traveling sources going away from observers.

It would squeeze (in between) for traveling sources oncoming to observers.

Remember that time stops ( $t = 0$ ) at the speed of light.

GLB

One traveler is no more real than the other.

I'm sad to see such an answer from you. You diminish yourself. I'm neither of Berkeley's breed dealing only in 'immaterialism' nor am I of Johnson's breed attempting to refute all immaterialism by kicking rocks. I can see to work both these facets of a multi-faceted Universe at once and will continue on in doing so.
