Jim Black (or somebody else of the same name) wrote thusly in message <1171171294.780830.13750@xxxxxxxxxxxxxxxxxxxxxxxxxxxx>:

The design for this machine will be posted weekly to sci.physics by an auto-posting bot. The flames boil water, producing pressurized steam, which turns a turbine, which in turn powers an electrical generator, which provides the power needed for the first step. I am currently seeking contributions for an initial test run.

You will need to build a working model before any financial backers would be interested.
