[snip idiocy]

For those skilled in the art it should be obvious that I would love to establish some exact math on this.

Why don't you tell us how much math and physics you have had?

So far you guys quoted me the laws of physics over and over again.

This is the physics I know on this subject.

The second law of thermodynamics prohibits the construction of a perpetual motion machine "of the second kind."

There are two usual statements of this law.

Kelvin's formulation states that it is impossible for a system operating in a cycle and in contact with one thermal reservoir to perform positive work in the surroundings.

Clausius's formulation states that it is impossible for a system operating in a cycle to produce positive heat flow from a colder body to a hotter body.

<http://scienceworld.wolfram.com/physics/SecondLawofThermodynamics.html>

Holy nobelty William Thomson, 1st Baron Kelvin (aka – you can call me Lord) is widely known from the scale of absolute temperature measurement he claimed to have re-invented, Galileo Galilei invented a rudimentary water thermometer in 1593. In 1714, Gabriel Fahrenheit invented the first mercury thermometer, the modern thermometer.

Re: permanent magnet motor

VIP Kelvin also mentions: the conversion of heat (or caloric) into mechanical effect is probably impossible, certainly undiscovered – but a footnote signalled his first doubts about the caloric theory.

Here Mr Kelvin is measuring the impossible in doubts.

"Heavier-than-air flying machines are impossible." said Lord Kelvin – president of the Royal Society – 1895. Later crawled back by antagonists into "technically impossible" because it was in his days.

Ptolemy believed the planets and Sun to orbit the in the order Mercury, Venus, Sun, Mars, Jupiter, Saturn. This system became known as the Ptolemaic system.

nonexistence speculations are never factual, their description of perpetual motion is not to be taken seriously in any way.

On <http://www.ajayonline.us/> we can read

" Einstein did not derive it mathematically but in true sense speculated it. "

In short he stole half then speculated the other half. (no math.)

Now you and your establishment have promoted his assumption to a law but it was just that. "An assumption" and nothing else.

Don't you know the laws of physics?
