## Inverted Gedanken Form

"A set of dog in a park caused the park's existence."

A dog set was to cause the park appears inverted form.

I know that, sometimes, English grammar can appear confusing but it really is easy once you get to grips with it.

## Re: Inverted Gedanken Form Clarified

Sometimes I start to believe he's actually a 'bot written by somebody whose first language is German (from his usual sentence\* construction).

But somebody's gotta be feeding the bot the ideas, and occasionally he comes up with a fairly good one (when he can be deciphered).

I am honestly amazed you have the patience and skill to extract readable sentences from what he has posted. I spent what felt like a month trying to reform this recent fully and all it did was make my eyes hurt.

A misspent youth featuring unreasonable quantities of hallucinogens and an adult–lifelong habituation to assorted cannibinoids in naturally–available proportions probably helps.

Sometimes I just get lost in the patterns, maaan.

I got the (odd) feeling that there was something interesting in one of the other posts but by the seventh read–through I had to give up...

This time I'm pretty sure he wants to extend the QM Observer Effect issue to all of physics; he's saying a thing cannot be defined independently of context, \_and vice versa\_. I've always thought that was obvious.

Or I might be having a flashback... ;>)

Seriously, he seems to have a weird form of dyslexia; he knows what he's trying to say, but his parseware tends to run sorta sideways to everyone else's.

\* I use the term loosely here.

Very loosely :-)

Ever notice his "sentences" resemble equations written in a kind of math you haven't taken any courses in?

Mark L. Fergerson
