It would require initiative. And you have to have that
to avoid pursuing an engineering career.

The marines who first stepped on the shores of Tarawa
island in WWII had to first walk half a mile in the sea
towards japs' heavy machine guns constantly firing at
them. They started the slow march at chest-deep water
half a mile away, and ended it at the shore in
knee-deep water ten yards away from the guns, all the
while holding their gears up with both hands to keep
them dry. And enough of them made it there to blow the
the guns and pill-holes up and make it safe for others
to arrive. Young Iranians of my age in the early 1980s
fought and destroyed Iraqi tanks using nothing but
Honda motorcycles and grenade launchers. Two on each
bike, tied together, one riding one shooting. They
weren't "defending" their positions, mind you. They
were attacking the tanks in enemy territories! Blew
them one by one while half of the Iraqis wouldn't even
get enough time to turn the tanks' guns toward them.
You need initiative to succeed in both cases.

"National progress is the sum of individual
industry, energy, and uprightness, as national
decay is of individual idleness, selfishness, and
vice."

– Samuel Smiles

Re: 8 lessons on shooting engineers

I blame the Vikings. They never fought during the second world war, they were neutral. They just used their money, amassed from the slave trade over a thousand years to set one country against another.

And since the Swiss banking industry controls everything, right into your own mortgages and businesses, but deciding interest rates and currency values, one country against another, they have it all sown up, including what gets taught in school.

And so devices like Meyer's never see the light of day nor does anything else that might change things, and the Vikings are dug into the mountains, and they have their nights in every major organization pulling the strings.

And it doesn't even look like they do, because the other banking centers like London, their banks are just spinoffs of the Swiss Banking industry, and then to be sure that they keep everyone hostage, all the rich barons and the big evil doers have Swiss Bank accounts and they keep their wealth there safe from their own respective governments.

And so all the big criminals have their money directly in their banks and under their control.

The Vikings are not stupid that's for sure, and they have done well using military might, sheer brutality, and intelligence, to control lives in the most distant corner of the globe.

And they can keep America fat, and just keep lending it money, what do they care as long as they control America, even though America is in debt 500,000 per family, and anyone who was solvent, sitting on the floor of a bus depot, should be considered to be 500,000 richer, than anyone in suburbia, but it doesn't work like that, because money alone is not the measure of true wealth. It is how many holdings you have and how well you play their game.

It didn't matter that Donald went bankrupt, because it is your ability to borrow, that makes you wealthy, even if you have no money at all. So all these things like wars and that are not usually for logical reasons. They was no reason to pay Saddam for oil for all those years when you could have burned Hydrogen, and then still no reason to attack him twice for oil you don't need either.

It is them playing chess with humanity, controlling the banks, the money and making puppets out of all.
