Who are the G7 is that the UN and do they have their won military or what?

The G7 nations are
Canada, France, Germany, Italy, Japan, the
United Kingdom, the United
States of America

And the G8 includes Russia. And you can see about inviting them in when they can afford it, and if you think it would be appropriate to include them.

It is the wealthy nations.

They each have their own military.

Re: 8 lessons on shooting engineers

It is not the UN, the UN disarmed Iraq so they could be invaded when helpless.

They are finished in politics and are now a social institution for the distribution of charity.

SO then how will they divy up the spoils and manage this migrant worker business these new Vikings.

Well they have an organization already, and they can do what they think is necessary to make it work, but competition is what makes things work well. So those who can get projects under way, and who can find and supply labor for those projects, those who secure funding for the projects, those are who will be doing it.

And the militaries themselves also have to cooperate with each other, to move people around and to maybe even supply labor within their country for a project. So you want the rules to be at least close, so you can just transfer people and work things out financially. And Russia can be a part of it as well. To the degree they can afford to secure funding and get projects under way.

And there is no reason, not to supply the railroad in China with migrant workers if they want them and if it is cheaper to do that.

Or any country that is economically feasible to do.

Re: 8 lessons on shooting engineers

So we will see a shift in economics from charity, to managing labor with regards to the IMF and World Bank as well.

When they invest into project, they will look at ways of utilizing labor, so that the countries they would ordinarily be giving forgivable loans to, can send workers and work for a living.

It is a more equal system, to allow others to work, rather than to just sink them into debt as has been the case.

But the G7 or G8 those are the Vikings, they are economically driven, have the powerful militaries, and are in a position to assist the poorer countries, by helping them get their labor forces employed.

And if a poor country is starving, or has too many able bodied men, unemployed creating social unrest in a country, then it is a pressure release valve that can prevent civil crisis and conflict as well.

And it is none of our business how much or how little you pay them, as long as it is very very cheap, and they are given decent working conditions.

What seems like a small sum to us, may be a fortune to them at home. And along the way, we will preach to them about population control, and promote health, and provide whatever assistance we can to help them manage their problems as we have done in the past.

But it is not charity, it is work. Just like we right now are doing those jobs ourselves.

We are in a position now, to let other people do them.

And that in itself is charity, but its not going to be easy, because now we have to adjust our own social class structure up a notch, as seamlessly as possible, without people crying hey, those migrant workers are stealing our jobs.

Well you wouldn't do it, for what they will do it for. So get some

Re: 8 lessons on shooting engineers

training. Become a pointer not a digger.

And so in Canada, we will want to build a high speed rail service from coast to coast, fix up our old line in parallel and fix up the one highway we have, the number 1 highway which runs alongside the tracks at present.

And then branch out and hit both of our two cities and do some work projects along the way across, maybe even starting at places all along and joining up sections. (Well maybe we have 5 cities, and some villages that could use some wood chopped)

<http://www.fraserinstitute.ca/shared/readmore.asp?sNav=nr&id=522>

So we are in debt 171,000 as opposed to your 500,000 but they are bs'ing us, because in 1999 we owed 3.6 trillion and that was 117,000 per household. Now we only owe 2.5 trillion.

So we are in a good position to get some work done!

(whispering truth is, we need that badly), because our cost of labor is killing us, on all levels, as we with a smaller population base, try to find some way, for a laborer, to have all the comforts of any business man, and that just can't be done.

So our cities and towns, and federally, we are really having trouble with our tax rate, because of the high cost of labor.

And we have so much in the way of resources, and have a lot of ways we can put labor to work, to make a profit.

So look no further, Canada can help with this program a lot, because you can get things out of the ground, with manpower, and you can do farm work, and you can do all sorts of things in this barren wasteland up here that you can turn into money with labor.

We have an excellent growing season, and we have natural resources, and we have room for more dams or highway projects, or railway lines, or pipelines even for fresh water transportation down south, whatever it is, you can do to make it work, it will help all of us involved.

And for every bunch of labor jobs you create, you create skilled jobs as well as part of any project.

.
