We say Universe is expanding.

Say Universe expands 5 times will the speed of light also become 5 times?

A Meter Scale we keep for observing distance will also Expand 5 times
So how this will effect the Speed of light?

So when Universe is Expanding are we all going Fatter and Taller by same amount?

And what is the speed of Expansion any way to calculate that?

Big Bang is False or True? Any Explanation of that.

Bye
Sanny

I bought a time machine that transports the entire universe into the future by 1,000,000 years. I've used it twice and it works great. As you can see, nothing was left behind.

Big Bang is False or True?
Two guys got a dynamite prize for hearing the Big Bang.
