Step by step on dark matter until it's all  $1+1=2$ .

So space has 3, time has 1, so far relativity.

And now we have 5, for mass (volume tortion), dragging forces of realignment. That the 4 dimensions are in constant change itself, and mass arises in the fifth dimension.

As a hypothetic step, one looks at  $E=mc^2$ , and sees one dimension of mass and 2 dimensions of time, forming 3 dimensional volume to Energy. mcc.

The way to derive mass in dark matter according to the theory I submitted is to find a 'constant of speed' (as in Universal constant in the fifth dimension for system s, perhaps) in the fifth dimension. In a spiral galaxy here I assumed that all Suns move with a similar speed distributed throughout a system. Once this average speed is found, be it near the center of the galaxy or out at it's perimeters, one assigns a growth in dark matter formula and this change in mass corresponds to power  $P(mv)$  in the fifth dimension. I refered to velocity of mass being a factor to Power, which refers to a matterless form of gravitational forces giving rise to mass we perceive as dark matter. The theory also strongly claims that dark matter is found in spiraling systems where a common speed factor arises with gravitational tides producing this mass and that dark matter is not found prominently in elliptic galaxies. In other words all things are at motion ( $v$ ) where there is dark matter.

I assumed that a distributed theory to the Universe is not compatible with theory of relativity, I perceived it as a science of it's own not relevant to theory of relativity when I submitted the paper, though noted that perhaps such science may simply not yet have calculations corresponding with Einstein's theory of relativity.

My theory on dark matter was a lot simpler. The purpose was to propose that dark matter is to be thought of as power, which carries mass and velocity, and I described the circumstances this power arises, and how it can be reverse calculated based on finding the average speed constancy in a spiral galaxy and see dark matter as one that arises in a galaxy from gravitational dynamics and tides produced by spiral galaxies. A tides of energy (and I used energy in the paper) that forms prominently on spiral galaxy disks, tides that are distributed and identified as a speed constancy factor of energy, meaning energy magnifies in spiral galaxies, and such aspects are unknown in the theory of relativity where magification of power is so dramatic and so different in mentality to pure relativistic concepts.

Isn't the general theory of relativity the theory of gravitation?

Does it explain what happens in the fifth dimension where momentum of gravity can build and add up in drifts, tugs, and of course light bends from built-up gravitational forces of power, one only people in Star Wars can understand and utilize straight from those dimensions, mind over matter, to live in more than 3, 4 dimensions of Einstein's relativity theories. Here one can lift a small mountain, move things about by reaching out to the fifth dimension and find energy in the midst of otherwise energyless forces of gravity. Here in the fifth dimension gravity can be utilized, perhaps energy can be drawn, but motion is effected. Of course motion corresponds to energy and mass corresponds with a notion of power. Did I say of course? Power, mass times velocity, here an object's course is part self-defined as in theory of relativity moving in it's own frame, part on a course that is not courseless, but altered, and with change comes energetic processes, and the arisal of power, and with power, the arisal of Darth Lord skinhead invasionazi with disturbed murderous tendencies to kill all life and establish the empire as leader of the Universe, indestructible, undeniable, one with a course to alter the Universe to his liking and to his command. Darth is not a likable fellow. ...

but a fellow who embraces in fears as barbaric means of display. As Kings, those not corresponding were brutally punished, as those in a place like where Attila the Hun ran, where he killed his own brother for half the power and the throne. Here there is only power, here, there is only a war to serve the greed, only one own can be trusted, and no one can come in the way of the empire, no one, as it is everything and it must be secured by the only one true leader. I say execute Bush like Ceausescu was for crimes against humanity. Many tried to stop Darth Vader, it

5th dimension is

who embraces in fears as barbaric means of display, Abu Ghraib followed. Back to barbarism, anywhere an American looks he is at war. Even in new Einstein theories deja vu seems to be haunting.

We found very strange things in the fifth dimension, the theory of power.

Subjects:

Raw energy, to name a few. Raw scientific characteristics. Raw and powerful dynamics. Raw display of force. A raw course taken to the end under the conversion of energy implied as force, tarnished as rule of law of nature of science, Bush's Universal dynamics of a central power, a house of control, tarnish and fierce, a raw grind of a black hool. Hool, power raw, power dynamics, power super strong. (evil laugh)

Hooles of Bush's Universal, indestructible, autonomous, lacks Democratic or Humane correspondence. Tarnish all mindlessly to be a raw characteristic of a system. What are we, Bush? Not all need the Bush party of fierce and tarnish and police. But many fall for the benefits of power.

Yes, dak matter reminds of the dark force and power it brings. Darth Vader's farm, two Suns in the sky, a dim feeling of calmness, but massive space ship excercizes, in the midst of calmness promises to a dad adopting you leaves Luke Skywalker to a place of fierce tarnish and war. He went to dismantle the central power of the dark force, but it turned out to be his real dad running it, and a dark force he could not accept joining, even if it was his dad.  
(evil laugh)
