Re: Calc. energy harmonics

You can't say anything sensible, you are the stupid prat that thinks the shuttle changes heading to west over Buffalo NY at 10,000 mph pulling 35Gs on its way to Cape Canaveral, doesn't fly close to a great circle at all times except final approach and pocket watches speed up in free fall. Not exactly someone any sensible person would want to have a meaningful discussion with, are you?

Hey clueless, aren't you that very same person that declared that the shuttle lands at the same speed and behaves identical to a normal jet airliner? Yes, that was you.

Evidently you realize that you are totally clueless and possibly retarded by posting the previous repeated mindless prattle. Man, was that ever clever (not). Make a total fool out of yourself if you want, I really don't care, because it seems like you are in fact a total fool from your history of posting.

What does not appear to sink into your mind, in the unlikely event that you have one, is that some of us here attempt to share the basic knowledge that we learned while in college with some people that were not so fortunate to share this experience. It is idiots like you who tend to detract from this free sharing of knowledge, evidently because you have never on your own acquired any knowledge. Sorry guy, that's your fault, not mine. Still, I find it pretty pettiful that you make every effort to detract from the readers hear acquiring any knowledge at all.

What is it with you, are you psychopathic or simply evil. Just for the record, I have known some very intelligent people that were simply evil. Many of us have, and if you are fortunate enough never to have met such people, trust me that in time you will.

Oh, by the way Androcles, I post using my real name, email address (hhc3141@xxxxxxxx) and my private telephone number is (978–256–6972).

I've had many emails and calls to which I have responded, You post total crap on the Internet, and conceal the method why nobody can reach you directly. It is obvious why...you are a totally ignorant nutcase. Every reader of sci.physics knows this, and most simply ignore your ignorant posts.

Re: Calc. energy harmonics

Re: Calc. energy harmonics

Feel free to call me if you want to discuss real physics, or if you would like for me to cut you a new one by telephone. I'm not sure that this is possible, but I would be glad to try.

Harry C.
