[...snip idiocy...]

Rather than directly laugh at the obvious stupidities you wrote, I asked for literature references. As expected, you couldn't provide them.

You have exceeded by far your daily 20 minutes by now dealing with stupidities. Watch it or else you are bound to soon exceed your mental confusion threshold.

You really are obsessed with this.

What to think of an unknown equation out of the blue that really works !

You haven't shown that it works _in any way_.

You haven't shown how a particle with no measurable mass, structure or electronic charge can have the properties of inductance or capacitance.

You are yet to provide even _one_ literature reference. All you have done is make handwaving remarks about intro physics textbooks and "study de Brogile".
