It's just depressing. The math people can't be beaten unless I solve the factoring problem because they lie about proofs so I need something they can't lie about, and that's it.

So I'm stuck. They'll win.

Ranted a bit, then I went back to wondering why this latest idea wasn't working. And I figured it out.

So, um, all the previous about potential negative impact applies.

Looks like only I had that deep down gut feeling that two primes could be used in this way, so if the math people tried what I had before, they might have noticed it didn't work but didn't realize that they should puzzle out why as it SHOULD work.

So they just went back to whatever they were doing supposing I'd failed, I guess.

I got upset, got depressed, and then just went back to problem solving as that's what I do.

And I figured it out.
