Thanks for the information. Seems to be what I am in need of.

However, I have bills and no money.

In order to make some progress on those books, I need some income.

Its called the library....

Thanks, but that's not my issue. To study those topics would take years of focus.

That's hard to do when you have bills to pay.

That's why most people that do this sort of work are paid by their Universities.

Interestingly enough, after Newton, the greatest scientists in the world formulated his own views of the world outside the structures of the University.

That's why I was thinking a research grant would be a good idea.

Yeah that requires an idea....

Re: Mike Helland Reading List

I have an idea.

This Japanese guy has a very similar idea:

http://www.sciencedirect.com/science?_ob=ArticleURL&_udi=B6T2K-47MKC18-2&_user=10&_rdoc=1&_fmt=&

Whether my ideas are worth exploring or not isn't really up for discussion.

There are thousands of people working on these ideas.

These ideas are going to fuel the next scientific revolution.

Who wouldn't want to be part of that?

If I could get some experts in QCD/QED and neuroscience to acknowledge my project, I could probably get the grant.

No you couldn't cause they'd want you to know your stuff before they gave a grant...

I ought to know having done this stuff...

That would allow me, with the direct guidance of experts, to make some headway.

Use the library and the internet....

I do.

Currently I am working through much simpler Physics textbooks.

You've been helpful in suggesting a future course for my studies.

Thank you.
