On occasion, I read what you post to Sci.Physics,  
including your 33 most recent posts.

I see you dwelling on what you don't like  
( to wit: non-textbook physics ) to the exclusion of what you  
do like:  
textbook physics. Everyone But You knows that.

For what value of "everyone" ?

The vast, vast majority of what interests me is not printed in any  
textbooks. What is printed in textbooks is either only the basics or  
horribly outdated.

It takes time for current concepts to be taught as bob standard.  
Relativity can be classed, now at any rate, as bog standard. The fact  
that the thread was renamed is to me indicative of something. Next  
time I change it it we be changed to

" The Black Sun and Aldebaran [khayyid?]"

That to me can be the only reason for this sniping. You see when  
people accept a theory that is experimentally confirmed there is no  
need to impute motives, they are following scientific method. The  
criticism, both in type and volume, of Relativity suggests strong  
ulterior motives.

## Re: Why is Relativity constantly under attack?

Ian Parker makes a good point when he points out that unscrupulous people con the masses into accepting models in order to promote their selfish agendas.

For example, Aztec priests conned the public into accepting their model that if they ripped out the hearts of people, that the sun would come up in the morning.

Jews conned the public into accepting much of their religious model.

Freud conned the masses into accepting his doped up, sexed up perception of how the mind works.

Marx and Engel conned some of the masses into accepting class warfare.

The America NeoCons conned Bush and some Americans into accepting religious warfare.

The best measure of a model is its' utility in a free and open market, not how it pits one class against another, one religion against another, one race against another.

For example, rational, intelligent folks who want to learn how to judge the value of models should compare the General Relativity model with the DNA model.

Note that although General Relativity has been enormously hyped for one hundred years, and Einstein was made Time Magazine's "Man of the Century" and the masses were conned into thinking that he was the most intelligent man who ever lived,

that Einstein's model is a Tower of Babel that wastes time, money and minds on such pursuits as time travel, warping through space, the beginning and end of the universe, worm holes, etc.

whereas the DNA model is used every day to improve health, create better crops, create better live stock, fight crime, reconstruct history, etc.

Re: Why is Relativity constantly under attack?

Thanks Ian for pointing out that the enormous hype of "Relativity suggests strong ulterior motives."

I suggest that this "ulterior motive" is to portray Jews as intelligent, virtuous victims rather than a criminal gang that has come into conflict with all of their neighbors throughout history.

Your pal,
