Let's look at velocity addition.

Many of the relativist rubber ruler world will tell you for high speeds close to light speed, that  $0.6c + 0.6c = 1.2c$  is wrong.

Yet the Einstein dingleberries actually use the answer above inside the transform when it is performed such as

$$0.6c + 0.6c / 1 + (0.6c * 0.6c) c^2$$

^^^^^^^

$$1.2c / 1 + (0.6c * 0.6c) c^2$$

^^^

Does that mean they like to use wrong math inside their equations for the transform?

OR does it just mean they have been brainwashed to think that a wrong answer inside an equation is OK?

Now go suck your thumbs and cry in the corner Einstein Dingleberries or come and call me the math ignorant one since you are using the "supposed wrong" math inside your stupid ass equation!

LOL
