would terminate specific
quantisation of
emitted Light.

Re: No infinite energy needed for lightspeed

Total bullshit talk.
Doppler effect would not do anything of the sort.

Well, he would change the frequencies of the emitted photons, what is what I said.

Oh
You mean like what color it looks like.
That would correspond to the motion reflecting the light at different frequencies.
Yet another silly thing that works with classical thoughts and simple doppler instead of stupid ass doppler that needs time dilations and length contractions instead.
:)

Thats what I mean...
Stupid classical Doppler would change the col
