physicsworld.com newswire (Week 39)

HEADLINE NEWS

A simpler way to test quantum computers
More 'classical' approach works wonders
<http://physicsworld.com/cws/article/news/36028>

New magnetic field could help explain Earth's magnetic-field flipping
<http://physicsworld.com/cws/article/news/36027>

Sir Brian Pippard: 1920-2008
Physicist proved the existence of the Fermi surface
<http://physicsworld.com/cws/article/news/35962>

LHC on hold until spring of 2009
Accelerator will skip 5 TeV test and start-up at full power
<http://physicsworld.com/cws/article/news/35942>

LHC team confronts first major hitch since 'switch on'
New teams are organized to investigate problem that may require the replacement of several magnets
<http://physicsworld.com/cws/article/news/35909>

LHC loses liquid helium
Accelerator faces first major setback since last week's successful "switch on"
<http://physicsworld.com/cws/article/news/35893>
