She's a narcissistic, attention-seeking fruit loop of the highest order. I expect nothing of her except further misinterpreted "evidence" and a great many more outright fabrications of the sort she's already proven herself guilty of – to with, her claim that I sent an email to her, a claim she now seems content to pretend never happened, the lying, slanderous troll.

sci.space.history: Re: LiOh Canisters: Especially for Herb

I'm also still waiting for: the names of her "teammates", the name of "scott's" pathologist, her responses to rk's specific questions, her responses to Michael Gardner's comments, her explanation of how a "hard short" of the sort she and "scott" claim occurred could trigger a fire in a de-energized RCS thruster quad in the SM which could then smolder unnoticed for 22-odd minutes with all the SM GSE panels open, yet burn around the circumference of the SM and be energetic enough to burn through the base heat shield and aft bulkhead of the CM.
