I liked the corridor the crew had to transverse that had the giant meat tenderizers banging up and down. This corridor existed on the ship for no apparent reason, other than it was used in an episode. The aliens reproduced it exactly because it had been in the series.

Here's a thought. Imagine if this movie had been done about fifteen years earlier, but they used the cast of Star Trek. Think of it, William Shatner, Leonard Nimoy, James Doohan, the black chick, Russian guy, and George Takei. Or better yet the actors from Battle Star Galactica.
