Eric Chomko; "Look I'm no Bush fan, but I fail to see how politics fits into the discussion."

I shall attempt to improve upon my previous wordings;

I believe that honest physics and science needs lots of funding (certainly more than it's getting as of today), and a reasonably peaceful world within which to practice their magic. I also believe that science and physics individuals, like between government agencies and NASA engineers simply do not communicate with one another, thus hardly anyone is connecting the dots on behalf of humanity, at least not unless there's another grant or an extension of the one there on somehow involved. Money talks, the truth be damned, and the buyer is always right.

Our country has self-inflicted great harm upon the entire world, by way of imposing at least several trillion dollars/euros worth of this 9/11 fiasco, and by way of our systematically dog-wagging, spinning and hyping the hype, of pushing humanity back decades by delivering so much disinformation-R-us upon the snookered and dumbfounded public, of only further expediting upon the course of those thousands lights burning brightly on an extremely limited supply of oil, that which this oil flame fest isn't over until our fat lady sings. You do realise that our resident warlord has been planning upon going nuclear over this global energy domination fiasco?

You simply can't divert the sorts of talents and resources for another war upon taking control of global energy resources, as persay blowing off such dollars/euros and of whatever humanity gets in the way, at least not without directly impacting the needs of science and physics research, not to mention the raw everyday needs of what the lower 99.9%(scum of the Earth) needs right here and now.

If we and our few allies have to keep spending another ten billion dollars/euros every week as focused upon blowing up half the world, then after the fact attempting to repair the collateral damage, as opposed to

sci.space.history: Re: Space Policy Sucks, while there's Life on Venus

the few dollars/euros that goes into honest physics and science, chances are that we'll all become either bankrupt or quite dead long before the fat lady sings.

Thus science and physics sucks really bad, especially if it's having to continually back the mainstream status quo until them Apollo cows come home. The actions and/or the equivalent of inactions is more often the direct result of folks insisting that history is entirely correct, and that they and their government never once made any mistakes, only made good things happen.

I can't speak for yourself but, at least I'm still human enough to be making mistakes, just like the mistake I've been making for the past five years in attempting to share what's a whole lot more truth worthy than mainstreamers care to acknowledge.

Regards, Brad Guth / GASA-IEIS
