In case they run out of more and more obscure Greek or Roman mythological figures, and if any JPL folks are lurking here -- may I suggest, as a name for the newly-discovered moon in Saturn, "Cowabunga". I figured this was only appropriate as it's the "wavemaking moon".

Hey, c'mon; there's a rock on Mars called "Yogi" now, y'know.

--

"All over, people changing their votes,
along with their overcoats;
if Adolf Hitler flew in today,
they'd send a limousine anyway!" --the clash.
