Did you happen to notice the shadow as it approached over the Mediterranean? I've heard it's possible to see it. I was in Side, but in the heat of the moment I was too busy looking up.

I was staying with the in-laws in Cornwall for the 1999 eclipse. The sky was totally overcast but that made the effect even more noticeable as the black wall of shadow swept towards us. I was surprised how dark it became. The street lights came on automatically.
