The moment I entered that website, my
anti-virus package informed me

that I

had acquired the bloodhound.exploit.104
virus. I was able to stop it

dead

and it was probably from one of the ads on
the page, but still...

Google serving up a virus? Kind of hard to believe. Did you
inform
Google?

Some Anti-Virus software claim to 'see' a virus, while there is none.
McAfee and Norton also have that habit...

I use Kaspersky and no virussus in my PC...

André

I'm using Norton. Checking the log, I find that the infected file was
placed in my Temporary Internet Files folder. And no, I haven't contacted
Google.

Re: 26 min Nasa film of Gemini 4 eva VIRUS ALERT

Action taken: Automatically deleted

Source: Manual Scanner

Risk category: Virus

Click for more information about this risk : Bloodhound.Exploit.104

Action taken: Deleted

Description: Affected areas:

1 Files:

3162764041-videojs[1].js within C:\Documents and Settings\...\Local Settings\Temporary Internet

Files\Content.IE5\31WGBV8U\3162764041-videojs[1].js – Deleted

Well hell, update from IE5 for starters. Jeez.

I tried it with Firefox for both my PC and my Mac – neither one of them had a problem. ClamXAV on my Mac didn't pick up anything and neither did Norton AV 2006 for my PC.
