Well hell, update from IE5 for starters. Jeez.

I tried it with Firefox for both my PC and my Mac – neither one of them had a problem. ClamXAV on my Mac didn't pick up anything and neither did Norton AV 2006 for my PC.

I'm using IE 6 with all of the updates on a Win2K Pro SP4 computer. The folder's name is unchanged from IE 5 and is used as is by IE 6.

But thanks for the independent checking on my behalf, Herb and Jonathan. I really do appreciate it.

Vince
