Is Peru shooting off Scud missiles? There were reports in 1995-1996 that they had acquired Scud B's:

"Unconfirmed reports in 1995 and 1996 have suggested that `Scud B' missiles may have been purchased by Armenia, Ecuador, Pakistan, Peru and Democratic Republic of the Congo; but these might have been built in the former Soviet Union or elsewhere."

Here we go:http://www.gulflink.osd.mil/envs/scud_irfna.htm

This fits very neatly to the observed facts; respiratory systems on those that approached the crater, flaming object falling from sky, big crater with metal debris around it.

It's no wonder that they are getting skin lesions if they are handling debris with RFNA on it.

Peru must have test fired one and it didn't come down where it was supposed to.

Pat

Sounds like that may be a neat fit in this case, never considered. Makes you wonder why in the hell they would be test firing a Scud tho' ? Was it muscle flexing , show, or training or maybe even working on next years Carnival (or something thereabouts)? All things considered pretty isolated, only a town or two in jeopardy. Do you have any info on that V2 damaging the He 111 tug or on the incident itself? Always guessing how fast that was going when it impacted, roughest estimate I'd venture is near mach 1 (just don't ask how I arrive at that one)Doc
