In article <13fgqp2cu86mia7@xxxxxxxxxxxxxxxxxxxxxxxx>, flanner@xxxxxxxxxxx
says...

I think we all need heaters in the freezers of our refrigerators to make
sure it doesn't get too cold in there.

Ah, Pat, you might want to try to be more imaginative and creative.

Most of our refrigerators already contain heaters. You may remember the
need to defrost the ol' ice box. Modern units are self defrosting by
blowing warm air over the cooling coils.

My dad actually had a refrigerator freeze up on him. Guess having it in the
unheated kitchen in the winter wasn't a good idea. ;-)
