On Fri, 30 May 2008 02:48:58 -0500, in a place far, far away, Pat Flannery <flanner@xxxxxxxxxx> made the phosphor on my monitor glow in such a way as to indicate that:

Jeff Findley wrote:

On a reusable vehicle, quality control problems like this show up during initial test flights. I believe that Boeing generally has at least one test flight of every airliner that rolls off its production lines. They don't just hand the thing over to the customer without testing it first.

If something major goes wrong on a reusable spacecraft's first test flight, it will immediately convert itself into a expendable. :-D

The same is true of a reusable aircraft. Do you have a point?

Run over to Lloyds and get your sense of humor out of escrow Rand. See, he was making a joke, not a point.

But I stand by my point that you have lost your sense of humor over the years.
