Anti-hypertechnological, upwardly mobile do-gooder proponents employed by the big oil / automobile manufacturers are pushing anti-legislation limits through their validation of a huge, invalidating complex of (anti-growth) research industry. The type of research employed by the big oil / auto manufacturers is attempting to boldly spin a web of deceit surrounding the use of free energy by sidetracking the real version of "limitless" with their own version of "greater" but "limited" energy to the taxpayer. One such avenue of departure for research giants such as the University of Texas at Austin and the University of Michigan would be to put a licensing authority over the technology which has the ability to control atomic vibrations in materials and limit "anharmonicity" in elements known to have a high G force.

Garnering their "Branch Davidian" status in research circles, the NSF, or National Science Foundation, is on the warpath to "underengineer" free energy propulsion technology by rewarding institutions with grants who can implement procedures for controlling anharmonicity in atomic nuclei. If these results (of purely superficial research) end up being a "tool" by an international bureaucracy of "policed over" automobile/oil manufacturers, then all of advanced propulsion technology is moot, and becomes divided amongst the incumbents, according to the thin sliced political statism (and not spirit) of the free willed environment of entrepreneurialism everywhere!

In Greek mythology, now one of the models of western civilization, the entrepreneurs of Daedalus and Icarus become trapped in the workshop of the god Minos, but escape when Daedalus designs artificial wings for both he and his son, Icarus. Yet even today a class of "pri-

Re: Masking the Subversion of FTL Technology with Ivory Tower Accreditation

soner-wannabes" are relegated to energy bean counting, but only in the licensed slepian modes of hyperon interchange!

If we assume that the exchange of energy between the positively charged ions into the Bi209 nuclei form a chromodynamic gauge transformation during gravitational resonance, with the positively charged ions affecting the proton spin/orbit coupling in the Bi209 nucleus to symmetric wave function for the electron spin/orbit coupling, we are assuming that such a transformation can only take place under Bose Einstein statistics for even numbers of protons and electrons. An induced reaction in the nuclei-electron field from positive ionic charge transfer produces amplification of the strong nuclear force on the order of 2 energy levels worth of valences, or $64 \text{ esu} = (64\text{esu})(299.8\text{V/esu}) = 19187.2\text{V}$ worth of charge. The question is how to initiate hyperon activity in order to create the chromodynamic gauge transformation from positronic ion to anti-positronic ion activity.

A stable radial virtual photon flux generator capable of bending light around it by assuming a fixed longitudinal gradient (that is, a Poynting energy density flow) is similar to the story of Shadrach, Meshach, and Abednego in the fiery furnace! Some side effects to photon absorption include luminescence, or the effect of a heavy atom such as Bi209 increasing the absorption band intensity of another, lighter compound. Shadrach, Meshach, and Abednego represent the first three dimensions of space, which represent nucleons, protons, and valence electrons, while the fourth dimension, or spacetime, is represented by a son of the gods! Could this "son of the gods" have existed with a grand unification creation such as the Hyperon? The physics of photon/antiphoton gravitational interaction needs to add the missing link to the unification of electromagnetic/gravitational energy through the use of overlapping states of charges that increase the Poynting energy density flow through a circuit. Charged barrier technology is the key to this missing link. Tunneling the Poynting energy density flow also requires filtering unneeded electromagnetic (and therefore gravitic) harmonics from self-amplification in the capacitive quantum well. What are the unneeded harmonics? First, an estimation of the harmonics involved in the Poynting energy density flow are calculated from the earth's spherical harmonic, mentioned in texts as being a 14th harmonic of Gauss coefficients degree n and order m , or

$g_{n,m}$ and $h_{n,m}$, respectively, as well as the gravitational force harmonic of degree n and order m , or $f_{n,m}$. The constant (or not-so-constant) term that enters into each of these terms is an argument of the derived Legendre polynomial, or a scalar $s_l = (r)$ times (e_3) , where r is a unit vector in the direction of R , with R as the position vector of the geometric center of the earth to the reference point above the earth (or to the center of the dielectric) and e_3 is part of the mutually perpendicular vectors e_1 , e_2 , and e_3 , with e_3 a unit vector in the direction of the north polar axis. " s_l " represents the $\sin(l)$, with l representing the geographic latitude of the dielectric reference point, converted from distance into a scalar radian value. This is where phase distortion is used to "rubberband" the strong G wave in the dielectric, by using partial dielectric harmonic compression of the particular tesseral harmonic that the dielectric interacts with, causing gravitic repulsion.

Fine tuning the energy levels for a high G atom such as Bi209 would require controls over magnitude, direction, frequency, and duration of restoring forces and their constants, as well as filtering of electromagnetic noise within the Bi209 nuclei. The advantage of using charged barrier devices is that higher frequency response in the calibration of gravimetric pulse drivers is achieved with little or no spurious signal loss over a wider range of frequency than for conventional charged capacitance devices. In addition to calibration of gravimetric pulse drivers, the damping of anharmonics at high amplitude is achieved by ladder pulsing in variable terahertz ranges @ hyperon levels so that variable gain is realized for specific changes in pump amplitude and frequency. The resultant infolding of the gravitational field at higher hyperon levels is a space time distortion from torus screw theory. Visible light becomes curved around the distortion as if there were nothing there.

Shouldn't this technology be allowed to proliferate based upon the diametrically opposed overbureaucratization (of inevitably dependent) private enterprise? The reason for underfunding "private" research represents a systemic contravention to the "processes" of validating technology, while the lesser processes of bureaucratic "things" get too much attention:

Re: Masking the Subversion of FTL Technology with Ivory Tower Accreditation

As if the trouble with intuition weren't enough, the logistics of placing large groups of scientists and engineers within a single US private industry shrinks as US bureaucracy cross-weans the technological trough (through validating the war effort, and thereby (inadvertantly) invalidating the potential transfer of (existing) technology to private industry. Even reinvention is grindingly inefficient without engineering skills and applications.

– ergo, summum bonum, or the ultimate Omega Point.
"Spirit is the force that activates free will through its gift of creativity" – Cybergrace, Chapter 4, p. 123, Jennifer J. Cobb, Crown Publishers, N.Y.

Inadvertant, anti-establishment borderline poverty proponent with a "factioned science penchant" seeks revolutionaries with an equal mindset for overcoming the greed-based lock on advanced technology.

A distant drumbeat is soon to be a war-cry...

American:

It may be that 'atomists' have gone full circle so much as the spirit of truth is finally catching up to them! "And they shall beat their swords into plowshares" might be the eventuality of truth-in-clay-feet thinking, yet mixed with "iron", doesn't really help to improve the human condition for "all of mankind"! The integration of scientific thinking with metaphysics still has a long way to go! As an advocate of DePalma's "homopolar" physics, I should note that DePalma often provides the connotation of male and female when referring to positive and negative polarities, as well as gyroscopic motion. Male-female polarization is developed out of space-time distortion, with the *DePalma N-machine* separating the spatial polarities directly through the mechanical distortion of the primordial Tachyon field. Rather than speaking of copper or silver as a "conductor"

DePalma speaks of copper and silver as being an "insulator", because it

"contains" the recombination of male-female energies with an internal resistance equal to "zero". The recombination of these "polarizations" should apply in some "socially useful" manner. The "observer" to all of

this taking place includes consciousness as a "witness" or "Shekinah glory" manifesting its presence in the form of a new creation from the primordial "soup" or "Dirac sea" – A free "gift" – depending upon how the "creation" is put to use! William A. Tiller, a distinguished scientist, has referred these "consciousness units" as *deltrons*, enough of which affect our local space of *U1 gauge symmetry*! The

Re: Masking the Subversion of FTL Technology with Ivory Tower Accreditation

U1 gauge symmetry consists of Abelian math, and so by understanding the Abelian gauge theory first, we can progress to the *non-Abelian gauge theory*.

Please be advised that I am not lecturing you, American, or anyone who reads this post. I am merely stating a case for FTL technology in the hope that sooner than expected, mankind will achieve superluminal space transportation for the purpose of utilizing extraterrestrial resources, as well as providing a way off the planet, in case of environmental catastrophe.

The non-Abelian gauge theory is a result of non-commutative properties of crystal group symmetry math, meaning that although the group follows

four characteristic properties, with the components of orbital angular momentum L_x , L_y , and L_z as component operators, they do not commute with each other and are therefore non-Abelian in a gauge transformation. Without digressing into the nature of these four properties, let it be known that they consist of operators that obey the properties of a mathematical group [B, C, T, A, G, J]. A point group on the order of 120

means that the mathematical group [B, C, T, A, G, J] has formed different arrangements of 120 operators within its subgrouping. The order of any subgroup must be an integral divisor of the order of the main group.

For example, a group of order 12 can have subgroups of order $12/2$, $12/3$, $12/4$, and $12/6$. Note that there need not be such subgroups for all groups of order 12. Using similarity transformation, it can be shown that orthorhombics, and icosahedrons are special point groups that can also be treated as a variety of quaternic, since they are divisible by four in a myriad of ways. Icosahedral crystal symmetry requires that a crystal be plane polarized for each orthorhombic symmetry, because the gauge transformation can be designed to "screen out" the *color magnetic field* using the non-Abelian gauge theory of quantum chromodynamics! Hence, the specific high amplitude laser pulsing in the micro-femto-second ranges using a positronium probe beam causes decompression of the atomic gauge field along the axis of the probe beam, which can then be utilized as a mechanism for propulsion in deep space, of course! Lesser velocities could probably be realized by detuning the probe beam a bit.

Mapping the earth's geodyne is as simple as acquiring daily maps of the solar charged ionospheric potential and programming a terrestrial flight path from point A to point B, while recognizing the need to filter out

Re: Masking the Subversion of FTL Technology with Ivory Tower Accreditation

any resonances that these potentials might create with a decompressing atomic quadrupole. This is a feedback, as well as a feed-forward phenom-enon, programmable as in the case of an expanding or contracting spiral

of decompression/compression for a quadrupolarized Bi-IV crystal, pulsed at intervals of the Bi-IV magneton, in the spirit of DePalma's Homopolar generator. Here we are talking about optimizing a DePalma N-machine, so that rather than having only one rotating gyroscope, the integration of counterrotating disk/tube arrangements makes it possible to decompress a ready-made atomic field, in the seed form of a Bi-IV polarized crystal, that decompresses along the axis of an applied probe beam, according to the pulse timing (frequency) and amplitude.

I should also add that without the earth's geodyne, objective/subjective consciousness would become awash with deltronic activity, causing chaotic consciousness, a victim of having no galactic reference time, or "zero reference frame", so that instinctively, humans are "unborn", and have no gravitic reference time, with which human consciousness can associate. Therefore, a single deltronic point in time, the moment of conception, is where the seed of consciousness is preserved, and protected. By preserving this reference frame, interstellar travel becomes possible at warp speed!

The spatial, inertial, anisotropic field of matter can be manipulated through rotation, which is why there would be counterrotation in a disk/tube twin pair arrangement concept, creating the anisotropic inertial effects observed in rotating gyroscopes, which again mimic the spin and precession of a rotating Bi-IV quadrupole. Forced precession of the rotating disk/tube arrangement concept theoretically creates a strong interaction with the atomic inertial field that the precessing "gyros" can be said to "lock in a space resonance" between the local inertial frame and the Bi-IV magneton. The direction of the current (i.e., mass) point in the

disk of a precessing gyroscope is unique and is known as streptoid, (Gk. twisting, English 'torsion'), and is not a combination of rotation and translation which are supposed to describe all mechanical motions. However, although we are dealing with resonating the quadrupole so that we can extract the atomic g-field without the side-effects of torsion, we should separate the bosonic exchanges from the deltronic ones by using what is called a Coxeter graph, in order to separate the total dimension-ality of the "Lie Algebra" into commutative and non-commutative dimensions. The non-commutative dimensions represent the "torsion" of the Einstein-Cartan unified field theory. This "torsion" must be separated, dimension-wise, from the commutative properties of 7D Cartan algebra.

Without going into the digression that solves for the number of dimensions for the non-commutative part of the 7D torus, these represent 126

non-zero roots (out of 133 total), which correspond to 63 "mirrors" as the larger part of deltronic "mirrorlines" which separate the bosonic exchanges from the deltronic ones. This is where the physics gets a little cloudy. It was mentioned earlier that the "icosahedral crystal symmetry requires that a crystal be plane polarized for each orthorhombic symmetry, because the gauge transformation can be designed to "screen out" the *color magnetic field* using the non-Abelian gauge theory of quantum chromodynamics". This is what needs to occur in order

to initiate a "bosonic translation". The "T" in the equations that are used to describe the n-manifold (for T^{**4} , or "T to the 4th power) as an atlas that identifies each list of 4 real numbers, representing 4 spacetime dimensions, to itself. The premise for "mapping an n-manifold

onto itself" requires that there is no such thing as a clock paradox, when relativistic clocks are actually "hodometers" of Minkowski world-lines. What this means, perhaps by all indications, is that a certain gauge group, E7, can become "unified" in the octahedral double group – a perfect quadrupole of the dual dipolarized Bi-IV crystal! The E7 gauge group represents the 7 "hidden" dimensions of 11-D supergravity theory!

There are too many people today relying too much on their typically foolish over-abundance of words of unquestioning authority regarding their self- and group- flagellating accounts of "hands-on" experience as an invalidator of anything worth investigating, so much as their accounts can seduce and subjugate the reader/listener into a conundrum of icon-worship regarding their own proud achievements, with the outcome resulting in the overall increase in group flagellation. This seemingly contrite accusation is magnified when potentially positive intellectual capital is reduced to a carbuncle of an idea on the stern of an uncompassed ship-of-fools, repeating itself indefinitely until

Re: Masking the Subversion of FTL Technology with Ivory Tower Accreditation

the ship is drydocked in places like Bangladesh. The potential of resonating new and fresh ideas are therefore reduced to a cacaphony of shrill, wanton rants on how to squeeze blood from a turnip, when, in fact, the answer has always lied beneath our feet!

It was the earth's geodyne that has always been, and always will be, our home and reference point to the rest of the galaxy. Using this fine

creation as our place of residence, the end-time prophets and scientists

are telling us that we are experiencing global warming, as well as a pole shift, that takes place every 26,000 years. The wisdom of the prophets indicated to us nearly 2000 years ago that there would be troublesome times ahead, and I believe that those who would rather stay with the "trouble" could never recognize that "hints" of the one sent by "God" when He said, "I go to prepare a place for you, so that where I am you may be also", and, "My kingdom is not of this world".

So it is with regret that I hate to inform you, that this is one of the

last countdowns to Armageddon before all hell breaks loose, and I really

don't want to be around for this one! No, the earth will suffer tribulation, just as the bible prophesied, thousands of years ago, but the way out is to provide the hospitality that a G2V sun like our own has provided us for the last few hundred millenia, give or take a thousand. Sirius B is said to have the same mass as the Sun, but only .0864 of the

diameter! This is equivalent to 7,300 miles in diameter, or about 92% that of earth. The ancient Dogone Tribe were given technology by the race of Sirians from Sirius B, an advanced fish-like mammal, who left the earth about 3000 B.C., who was a part of the Enlil faction of Nephilim, who hate the Draconians and their ruler, Satan. This Enlil faction includes the human looking groups, which include the Nordics (Lyra), who are human looking, tall blondes; Pleiedians, from the belt of Orion, who are also human looking; Alpha Centaurians, human looking;

and the Venusians, who are also human looking. It should be "no wonder"

that "God" had created us in his own image if the fallen angels consist

of "Draconians": Greys from Zeta Reticulum; Tall Greys (from Orion); Reptilians (Earth based), Lizards; Draco-Reptilians from Orion (they are

the rulers over the greys and the reptilians); Draconians, who are red dragons, including Lucifer himself, and the Annunaki, who are those who

joined in Lucifer's rebellion against the Lord.

Re: Masking the Subversion of FTL Technology with Ivory Tower Accreditation

After studying the different star systems of the Enlil factions, I have come to realize that only one of the star systems is a G2V cousin to the earth. In fact, Altinac, an "O" type star in the easternmost part of Orions belt, has a "B" type companion star about 3 arc-seconds away, which is approximately 817 light years distant from the sun. Alpha Centauri, which consists of two sun-like size stars, A. Centauri A & B, that orbit each other, 'A' being a "G" star about 1.5 times brighter than the sun, and its companion 'B', a "K" star, about as half as bright as the sun. The third member of this Centauri system is proximus Centauri, which is a red dwarf star about 7000 times fainter than the sun, and has a very wide orbit of millions of years.

An interstellar spacecraft would have to navigate carefully around these star systems before scanning for habitable planets to live on. Of course, we humans are hedging our bets on finding advanced life similar to our own, if the mythology of these beings is indeed, true. Yet we have left out the Venusians, who are supposed to be living somewhere on Venus. Perhaps in the distant future, as the Venusian orbit changes, with its resulting climatology similar to the once populous and thriving earth, these sentient beings have discovered a way to time travel back to earth, and warn us of impending doom, if we do not change our relationship with the God of the universe.

.
