I don't see this discussed in-group recently; refer me if I missed it.  
In a crossposted thread, it was mentined

From: Joe Strout <[joe@xxxxxxxx](mailto:joe@xxxxxxxx)>

I have a design I've slowly been fleshing out for a habitat of 2000 people (about 2/3 of whom would be tourists at any given point in time), and I wouldn't be surprised to see something like that within 30 years. I'm obviously assuming here that progress in the next 30 years will be substantially faster than in the last 30 -- but there are lots of good reasons for thinking that may be the case.

What are a few of these reasons?
