This is ONLY the GASOHOLIC'S ALTERNATE REALITY:

SVALSIK has just announced completion of its "Geodyne assimilator" for recon missions to the asteroids. The "assimilator" allows "NHC" tuning for resource exportation at the rate of 1000 grams per second. The Nano-Host System features dimensional filtering up to the 11th chirality using 1 over pi nano-emitter substrate in the portal circumference. Controls feature a calibrated spectral resolution slider for smooth incoming and outgoing transmissions. Crystal integrity up to 1.2 parts per million phase resolution for cargo transport.

AND NOW, REWIND TO 1982:

BRADY:

Mr. Chairman, it is a privilege for me to be here again. I have testified before this subcommittee previously. As a matter of fact, it is three years ago this month that I testified over on the house side before the House Armed Services Committee in which I disagreed with the political appointees of the Carter Administration and indicated that the technology which we were licensing to the Soviet Union, specifically for the Kama River plant, was being diverted to the Soviet military. It is 10 years ago this month that the president of the United States inaugurated the era of detente with a trip to Moscow.

A central component of that historic trip was the hope that greatly expanded trade ties between the East and the West would lead to mutual cooperation and understanding.

Obviously, those hopes have not taken place. In that 10-year period, as we in the administration have indicated in the last year, we have been exploited both legally and illegally by the Soviet Union and Eastern Europe. This technology which has helped the Soviet immensely in their military industrial infrastructure. Again, 3 years ago, I personally disclosed the failures of the Commerce Department in the licensing process, referring to it,

Re: The Dangerous Liberty of Engineering vs. Lukewarm Dominionism

as I said in my testimony, as a shambles.

[Brady was criticized and his information suppressed for speaking out]

CHAIRMAN ROTH:

Thank you, Mr. Brady. Mr. Brady, the members of the subcommittee are, of course, aware of your personal commitment to this important area, but I believe that it is important that the record reflect fully your position on the specific question of export technology and particularly reference the efforts some years ago to help the Soviet Union construct some trucking facilities.

Would you, for the purposes of the record, explain your role in this matter?

BRADY:

Mr. Chairman, about 3 years ago, the Export Administration Act was up for review, the House Armed Services Committee decided that it was going to hold hearings on that extension, in addition to the committee of appropriate jurisdiction, namely the Foreign Affairs Committee on the House side.

There were some statements being made on both sides in Congress that were not totally consistent with the facts. We had intelligence information that trucks were being produced at the Kama River plant for the Soviet military and, in fact, being distributed to Eastern Europe for use in Eastern Europe endeavors.

An administration witness was asked about that and denied it. I was asked about it and confirmed it. And, as a result of that, I was labled a whistleblower and eventually left the Department of Commerce. In point of fact, that was the tip of the iceberg. There had been apparently intelligence through the 1970s, particularly the latter half of the seventies, indicating that there was substantial diversion taking place (and) ...for some reason the intelligence just didn't get to the top. So that was my role. I eventually had to leave government for it.

Director of the Hoover Institution, W. Glenn Campbell, had also claimed that the book: National Suicide: Military Aid to the Soviet Union was a "plagarism of the author's works" that was published by the Hoover Institution, and removed the title "Research Fellow" from the author, Antony C. Sutton, and removed both his name and that of his secretary from the personnel roll of the Hoover Institution.

Re: The Dangerous Liberty of Engineering vs. Lukewarm Dominionism

Glenn Campbell became chairman of Ronald Reagan's Intelligence Oversight Committee.

Clearly, there is a conflict of interest between the Dominionists in government and economic independence in the U.S., yet the representatives on both sides of Capitol Hill would rather represent the transnationalist continuum of Federal Reserve supply, since bureaucratic sponsorship became the latest transnational approval tool of favoritism, rather than having independent engineering entrepreneurs find seed investors to stop the tide of international dominionism. The tares have thus become a prerequisite for the wheat getting into the international marketplace.

"Men and governments, no doubt, are selfish, and prone to abuse power when they have it; but no government can stand that rests only on the selfishness of the human heart, or on what in the last century they called "enlightened self interest," *L'interet bien entendu*, and not on the sense of duty, strengthened by loyal affection. People must feel not only that it is their self interest to sustain government, but that it is their moral and religious duty to sustain it; and when they have no moral sense, no religion, and no loyal affection, they should know that they cannot sustain it, and society must cease to exist. A nation of atheists were a solecism in history. A few atheists may perhaps, live in society, and even serve it for a time, where the mass of the people are believers and worshippers, but an entire nation of atheists was never yet founded, and never could subsist any longer than it would take to dissipate the moral wealth acquired while it was yet a religious nation. It is well said by the Abbe de La Mennais, before his unhappy fall: "Religion is always found by the cradle of nations, philosophy only at their tombs" – meaning, as he did, philosophy in the sense of the rational exercise of the faculties of the human mind on divine and human things, aided by the light of revelation. The ancient lawgivers always sought for their laws not only a moral, but a religious sanction, and where the voice of God does not, in some form, speak to men's consciences, and bid them obey the higher power, government can subsist only as a craft or as sheer force, which nobody is bound to respect or obey."

– Liberalism and Progress, Orestes Brownson, *Brownson's Quarterly Review* for October, 1864

One would be apt to disqualify the "invasion" of Iraq or the "invasion" of Lebanon as an attack on religious freedom if more attention were paid to the moral responsibility that the "Good Samaritan" teaches, yet the focus was purely upon contemporary liberal ideology, and where the 60 year veil of bureaucratic grace-to-humanist-belief paved the way for Dominionist government to enslave those just escaping the tyranny of transnational-

Re: The Dangerous Liberty of Engineering vs. Lukewarm Dominionism

ist partnership, in the form of exporting trade secrets and the waiver of unblessed assurance, in order that the re-negotiated God of humanism would make *God's natural laws* the uncompromised scientific dogma of Dominionists. The lie is that most voters still believe that humanism should exist as a religion alongside moral relativism, and that Dominionism is 'just another religion' alongside Christianity.

The business of lending blood money is one of the most thoroughly sordid, cold blooded, and criminal that was ever carried on, to any considerable extent, amongst human beings. It is like lending money to slave traders, or to common robbers and pirates, to be repaid out of their plunder. And the man who loans money to governments, so called for the purpose of enabling the latter to rob, enslave, and murder their people, are amongst the greatest villains the world has ever seen.

– Lysander Spooner, No Treason (Boston, 1870)
