Brad,

They may have told Edison
he was nuts when he tried to
send high-
speed morse code across the
Atlantic, or when he wanted
to perfect the
lightbulb and mass produce
it

They may have laughed at

Re: Solar powered lasers in space

Ford's horseless carriage.

People may even have
arrested Bell when he
demonstrated his telephone
in Philadelphia.

But, that doesn't mean
EVERY person they say
was nuts is NOT nuts.

Sometimes, Brad,
sometimes, the ridicule
some receive is well
deserved.

Rarely, sometimes not.

In your case, Brad, in case
there is any doubt in your
mind (because
there is no doubt in anyone
else's mind reading this) the
ridicule
heaped upon you and your
ideas, that ridicule is richly
deserved.

In other words, deep down in your little
black heart you really don't
give a hockypuck about salvaging our
environment, nor do you believe
in the regular laws of physics, or in utilizing
the best available
science. Now I understand, fully.

Re: Solar powered lasers in space

I must also say that on
occasion – I am sad that on
that rare
occasion – when you have
been especially maddening,
– I am sad that I
cannot reach through the
monitor and do you serious
bodily harm or
inflict lasting deep pain to
you – preferably in a way
that leaves you
physically disabled to match
in some poetic way your
obvious mental
disability.

Gee whiz, and here I'd been promoting most
of everything you've got to
offer (though no one is perfect, including
Einstein or yourself),

I never claimed perfection – and I never asked for or sought
your
support. haha.. C'mon – this is the oldest trick in the book.
The
opposition pays all the whores pimps drug dealers to come to
a meeting
and disrupt it with their foolishness, and then they complain
loudly,
fight and generally tear up the place when they're asked to
leave –
and THAT becomes the story at 11...

The only way to deal with that is to have strong capable
bouncers scan
everyone as they approach the meeting hall, and 'persuade'
'undesireables' to move along... without a public outcry –
again a
swift kick to the groin to the baddest of these is generally
sufficient – but alas, you cannot do this on internet! haha..

Re: Solar powered lasers in space

So, don't cry alligator tears to me Bruth – I know your game
– and
you feel yourself immune. You gotta know exactly what
you're doing.

and
just as I'd said that if I were ever put in
charge, whereas apparently
I'd be the only one forking out a nifty 50/50
worth of R&D matching
funds on your warm and fuzzy behalf.

You have never given me funds for anything, you have never
offered
funds to me, you have never been asked for funds from me,
you most
likely have no funds to give to anyone anyway – it all being
in your
head. So, I gotta ask – WHAT THE HELL ARE YOU
TALKING ABOUT. You
either say things because it gives you a hard on for the
moment to
imagine they're true – so, its all mental masturbation – or
you are
fond of saying things that are damable lies.

Sorry, my mistake,

Yes. I don't want need or value your support. If you'd like to
earn
by gratitude and lasting admiration there is one thing and
ONE THING
only you can do. Commit yourself to not posting writing or
even
reading anything online for a year. Do, that and then we can
talk
AFTER.

as I'd rather
stick with those ENRON/Exxon types that
get loads of stuff

Re: Solar powered lasers in space

accomplished, though spendy, polluting and even somewhat lethal as all get out.

Enron got nothing done and they ended up in jail and the poorhouse – so this makes no sense. Exxon is a respected and quite capable company that produces a goodly percentage of all the energy used on Earth. They have no idea of what sort of strategy will secure their survival and dominance for the next 30 years. Their behavior shouts this from the tree-tops. This is actually a quite hopeful sign to those who DO have a workable strategy.

I will finally say, that this response by you to my commentary, though not unexpected, is one of those rare times you are rather lucky I cannot reach through the internet and slap you in the face.

Face slapping?

Or groin kicking yes. Preferably when you read my stuff, rather than after you post. That way, the message is clear. Don't read Mook's shit Bruth – you'll get a pain in the nuts if you do. and you move on. See? If there is anything in the usenet universe that would bring me everlasting joy and happiness – it is that. Whenever you THINK about reading my shit, you get a pain in your nuts, and decide differently.

Re: Solar powered lasers in space

So, to that extent, I would like to kick you in the nuts. I get an alert that you've pulled up a post of mine, I reach through the monitor with my boot, and kick you in the nuts. I do that until you stop reading my shit. See?

After that, I don't care what the hell you do! haha..

Silly old me for being 100% in support of what your supposed talent and expertise has to offer,

Yeah, well, like Huey Long's kicking the whores and whatnot out of his meetings – I didn't ask you to attend in the first place. Move along! lol.

on behalf of your intentions of improving our global environment

Since I would actually like to do something of value – I would like not to have to deal with you AT ALL!

on such a grand scale, and for the greater good of humanity to boot. I'll see what I can manage in order to return the warm and fuzzy favor with all the "face slapping" love and affection that I can muster.

Like I said, I don't even read your shit, unless its in response to

Re: Solar powered lasers in space

something I've said, and then I generally ignore it. But since you took the trouble to say something nice about me – I wanted to make it clear to anyone who reads this that I have nothing but the deepest sympathy for your parents – and want nothing to do with you. And if I could, I would kick you in the nuts whenever you thought of reading my shit – that way I wouldn't have to deal with you at all.

Why not just publish in Usenet whatever's needed to go on your pathetic and extremely lonely grave site, and call it good. Perhaps "Here lies Bigots–R–Us, Willie Moo" or simply "Up Yours, because I too gave up".

– Brad Guth — Hide quoted text –

– Show quoted text –

Well, that's all part of if I change my mind they win madness you drone on about you stupid bitch. Do me a favor – leave me the fuck alone. Do yourself a favor. Unplug your computer and crawl out of your dark basement and walk through the light of day and actually talk to a person or two – and find out what its like to actually have a life you pathetic loser. Put aside all your projects, plans and so forth for a year and repent – go in a different direction – and see what its like.– Hide quoted text –

Subject: Solar powered lasers in space

In 1996 I wrote in these newsgroups about an idea I had worked out about using thin film reflectors inflated on orbit to concentrate sunlight onto a solar pumped laser. That laser beam would be beamed to receivers on the ground which would convert the power to electricity and thermal energy for industrial use. Overall efficiency would be 40%

I was roundly attacked by all – and so, it was with great interest that I read the following on yahoo news service in 2007;
<http://green.yahoo.com/index.php?q=node/1521>

I am fully justified in my earlier statements – and all those who mercilessly attacked me have been proved dead wrong in their negative assessments of my ideas.

–

There's no question that your entro topic was 100% correct.

However, notice that I haven't attacked but always fully supported the use of SBLs and of those being solar energy pumped or tether dipole energy pumped. The very basis of my LSE-CM/ISS within the moon's L1 and of its tether dipole element that'll reach and sustain such SBLs to within 2r of Earth was entirely promoted as an array of 100 GW class of such laser cannons.

Notice that you're the one as having been continually attacked by those I and others would claim to be Third Reich supporters and Yiddish to boot, and they are still the ones continually attacking in ways of Usenet topic/author stocking, bashings and/or banishment, because it's what they do best to outsiders like yourself. You could even be Jesus Christ as one of their own kind, and for another PR stunt they'd allow your butt to being put on a stick, so there's really nothing they wouldn't do for their next buck or whatever PR support they can drum up, and it's also why they are in charge of most everything that counts. Like most of us village idiots, you're just to far snookered and dumbfounded past the point of no return to take notice of the faith-based species that has got their private parts stuffed into your butt, and then some. The more your squirm, the more they like it.

Re: Solar powered lasers in space

Just stick to the facts and keep posting as much of the truth as you can muster, because that's exactly what they hate the most, and don't forget to return their topic/author stocking, bashings and banishment with all the love and affection that you can muster, because that's also the ongoing matter of fact truth.
