You simply can't pin anyone down to a straight answer. In the thread

[http://groups.google.co.uk/group/sci.space.policy/browse\\_frm/thread/9...](http://groups.google.co.uk/group/sci.space.policy/browse_frm/thread/9...)

we see that something like \$3million is being spent just on a feasibility study for a fully reusable space vehicle. It is, at best, a fair way in the future. At last we have recognition of that fact.

(snip again –though I agree with your sentiments on the snipped part of your response )  
– Ian Parker–

I went to the Library today to try and get Nick Pope's "Jane" article written in their February 29, 2002 titled "Anti-gravity propulsions comes 'out of the closet'". The previous place where I had seen the link there was only a 5–6 sentence part of the abstract. The library at least gave me 499 of the full 873 word article that as I recall came WITH images and illustrations of the B2 Bomber which admittedly heats the front wing so that positive ions are created and that negative ions are jetted out the engines...thus causing a "electromagnetic lifting/pushing" effect...depending on voltage and center of gravity directions of the magnetic field placement. I likely saved the article back in 2002 but finding it again in the 100's cds n DVDs would be a night mare...I thought it would be easier to go the library and pay to have copies made of the article....now I'll have to try the University Library...or hunt it down in the many boxes have.

But again this "electro-gravitic anti gravity propulsion" HAS been out there in mainstream before...but...never FULLY covered....why?

The DOD...NASA IS a DOD agency.

From a FOIA I tried filling with NASA:

R4. I hereby request any documents, images, memos or other items that NASA has received or sent, from or to, any source, internal or

## Re: Cheap Access to Space

external, at any time, which deals with the subject matter of the classification of non-Earth images or data, of any type, in any manner that would preclude, bar, hinder or prevent, in any way, the general public from viewing the images or data from any spacecraft.

R5. I hereby request that any documents, images, memos or other items that NASA has received or sent, from or to, any source, internal or external, at any time, which deals with the subject matter of the classification of non-Earth images or data, of any type, in any manner that would preclude, bar, hinder or prevent, in any way, the general public from viewing the images or data, requested in R1 through R4 of this request that are ruled to be exempt under Sec 1206.300; be so noted in the reply and which sub-part and paragraphs are used to justify the exemption from disclosure be set forth in the reply to this request.

R6. I hereby request a complete list of any documents, images, memos or other items that NASA has received or sent, from or to, any source, internal or external, at any time that have ever been excluded from disclosure under Sec 1206.300 sub (b) para (1) or para (9) that deal with non-Earth data, of any type or source, and the dates and reasons such exclusions were made.

Notice that these last 3 requests were for "NON-EARTH DATA"...i.e if there's "nothing of military or national security interests" on the Moon, Mars, or any other celestial object...then WHY would NASA classify such data UNDER that rule? Why would NASA even NEED such a rule if our thinking is along the DarkAges Where Humanity is:

1. All alone
2. On a flat Earth
3. At the center of the Universe
4. As it revolves around us
5. Riding on the back of a giant turtle

We are beyond ready to move past the Brookings Report and EMBRACE the entities out there and it's time for someone to either:

<http://commonsensecentral.blogspot.com/2005/08/area-51-where-are-you.html>

<http://commonsensecentral.blogspot.com/2005/10/its-time-to-hijack-starship.html>

And then there's the MONEY to get the COMMERCIAL parts going already in place with the Undroit Treaty:

[http://commonsensecentral.net/how\\_to\\_achieve\\_cats.htm](http://commonsensecentral.net/how_to_achieve_cats.htm)

We have HAD the technology...only it was available only to the DOD folks...

Re: Cheap Access to Space

It's the Holiday Season...Spread the Good Cheer and Good Word...

We were NEVER alone in the Universe...and we had, and have neighbors...close ones.

:D

Bob...:D
