..

sorry, but, I (don't only) think that the Ares-1 is a bad designed rocket (that can't fly) but (also) that it could become VERY dangerous if a manned or test launch abort occurs

that since and SRB-5, without the ejected Orion and the broken 2nd stage, it could reach (and falls on) the cities around KSC, as explained in this ghostNASA article:

<http://www.ghostnasa.com/posts/021chillinglaunch.html>
